PACHYSANDRA (Spurge)

Under trees Pachysandra is the real answer to the problem of covering the bare ground with greenery. Another advantage is the protection to the roots of trees afforded by the Pachysandra. The glossy foliage is very attractive. Use 2 or 3 to 1 sq. ft. of the area to be covered.

You will find that many of the rules for landscaping are the same as those used for purchasing clothing or designing clothing—you want to achieve an effect best suited for your needs. In landscaping however, you work with living plants, trees, shrubbery, garden accessories, fences, arbors, etc., which are not easily tried on or moved around

after they are planted. They must be placed right at the outset and a study of your needs are important before you start. We are prepared to serve you well, and the plants need not be expensive. A friendly welcome awaits you!
